Running reports in Forefront TMG 2010 yields virtually unreadable reports no matter what browser or version of browser you use .

The problem is that reports are in old document format.

Find the report folder and edit the **Report.htm**

Under the **<head>** add the following line

```
<meta http-equiv="x-ua-compatible" content="IE=7">
```

Save **Report.htm** file and use your Internet Explorer to open it (double click on it).

Your report should now be/read fine.
