

Outlook Autodiscover does not function correctly

Written by Administrator

Tuesday, 01 November 2011 17:33 - Last Updated Sunday, 06 November 2011 09:49

Look for the following entries under **HKEY_CURRENT_USERSoftwareMicrosoftOffice12.0OutlookAutoDiscover**

and remove them.

```
"PreferLocalXML"=dword:00000001  
"ExcludeHttpRedirect"=dword:00000000  
"ExcludeHttpsAutodiscoverDomain"=dword:00000001  
"ExcludeHttpsRootDomain"=dword:00000001  
"ExcludeScpLookup"=dword:00000001  
"ExcludeSrvLookup"=dword:00000001  
"ExcludeSrvRecord"=dword:00000001
```

Note: *Save your registry before making any changes.*

This applies to Outlook 2007 with Exchange server 2007.

The problem occurs when "Microsoft Online Services Sign In" application is installed.

It may also apply in other circumstances where a plugin also makes such changes.
