

Internet Explorer not responding (even on running for the first time)

Take into consideration that if it's not browser's problem, then there's 99% possibility that problem has started from an add-on! Follow the steps below:

1. Click on Start
2. Go to All Programs
3. Find folder named Accessories
4. Click on folder named System Tools
5. Open Internet Explorer (without add-ons)
6. If there's not the bar with the options on the top side of the screen press Alt
7. Click on Tools
8. Manage add-ons
9. Toolbars and Extensions
10. Turn off the ones you may find more "guilty"

I found that this problem most times had to do with Adobe or Antivirus add-ons. Also, take a look at accelerators and disable (or remove) the same things.
