In Windows 7, Server 2008, Windows 8, Windows 10, Windows 2012 and flavors of Windows Vista there is an unpublished ability to create a control panel called **GodMode** that allows you to have easy access to almost all administrative tasks that you would like to use in Windows.

This new window is called **GodMode** because it puts all aspects of the management of Windows at your fingertips in one location.

This allows you to quickly configure Windows settings or hardware from one screen. In order to access GodMode you must first create a special folder on your desktop as described below.

It is important to note that GodMode only works for 32-bit and 64-bit versions of Windows 8, Windows 7, 32-bit versions of Windows Server 2008, and 32-bit versions of Windows Vista. It is known, though, to crash Windows Vista 64-bit, so please do not create this folder on those versions of Windows Vista. If you decide to test it on 64-bit versions of Windows Vista, you may need to reboot into safe mode to remove this folder.

To enable the GodMode folder on your desktop, please follow the steps below.

- Close all open windows so you are at your desktop.
- Right-click on an empty portion of your desktop and select **New** and then select **Folder**.
- Enter the following as a **name** for the folder

GodMode.{ED7BA470-8E54-465E-825C-99712043E01C}

After you press the name changes to **NGodMode**
